SVM980: Walvoil's new hydraulic pilot control valve

SVM980 is Walvoil's new hydraulic pilot control valve with differential area.

In this way Walvoil expands the hydraulic pilot control valves range by introducing a unique product for at least two main features:

- the lowest operating forces for the operator among the entire range of hydraulic pilot control valves
- the possibility to manage and regulate high flow rates, thanks to the large diameters of the spools a useful and necessary condition especially on large machines.

Thanks to a new patented design solution as well, Walvoil changes the traditional construction architecture used for other products of the same type, offering an innovative, original, solid and reliable product, completely adaptable to customer needs by the modularity of the fixing flanges and the endless possibilities of completion thanks to the compatibility with all the handles of the Walvoil catalogue.

About Walvoil

Walvoil, part of the Interpump Group, merges also both the experiences and Hydrocontrol and Galtech brands.

Among the main manufacturers of integrated hydraulic products, electronics and complete mechatronics systems, Walvoil designs the future of motion in close touch with its customers and its partners from different sectors and markets.

Present in Italy with seven production sites and a well reknown Test Department, that is the core of all its R&D activities, Walvoil can count also on eight branches in four continents and a capillary sales network allowing the company to be close to its main markets worldwide.
